

110b, 111, 112, 113, 114a, 114b and 114c. A separate letter to the draftsman indicating the same proposed drawing changes is also enclosed.

In the Claims:

Please cancel claim 3, without prejudice.

Please amend claims 1, 4, 5, 9, 17, 19 and 20 as follows:

BK
Sub
C1

1. (Amended) A liquid crystal display comprising:
a sealing material having a photo-curing type material for sealing liquid crystal sandwiched between two substrates, wherein the photo-curing type material has a light reactive area in a wavelength of blue color band; and
a blue-colored layer formed at an area of a shading film, wherein the blue-colored layer contacts the sealing material.

Claim 3 is cancelled without prejudice.

BK
Sub
C3

4. (Amended) A liquid crystal display comprising:
a sealing material made of a photo-curing type material sealing liquid crystal sandwiched between two substrates;
a shading film formed on one of the two substrates;

a transfer having colored particles, formed at the lower portion of the shading film, and electrically connected to the two substrates; and

a light incident hole opened at the shading film above the transfer.

5. (Amended) A liquid crystal display comprising:

two substrates sandwiching liquid crystal and opposing to each other;

a main seal attaching the two substrates at an external peripheral portion of a display area of the substrates;

a frame-shape structure formed in the area between the main seal and the display area; and

a black matrix picture-frame shading an area between the main seal and the display area;

wherein an external peripheral end of the frame-shape structure and an external peripheral end of the black matrix picture-frame are formed to coincide with each other viewing from a perpendicular direction to the substrates.

9. (Amended) A liquid crystal display comprising:

a sealing material made of a photo-curing type material sealing liquid crystal sandwiched between two substrates;

B3
Cond'd
Sub
C5 end

a light-reflection layer having a concavo-convex structure which has inclined surfaces and formed in an area contacting with the sealing materials of at least one of the two substrates.

B4
Sub
C6

17. (Amended) A liquid crystal display comprising:
two substrates attached opposing each other;
a sealing material formed outside a display area having a plurality of pixels for sealing liquid crystal between two substrates, and
a plurality of structures formed inside the display area for controlling spreading of dropping liquid crystal.

B5
Sub
C7

19. (Amended) A liquid crystal display comprising:
two substrates attached opposing each other;
a sealing material formed outside a display area having a plurality of pixels for sealing liquid crystal between the two substrates; and
a concave shape structure provided in a frame shape between the sealing material and the display area, at least on one of the two substrates.

20. (Amended) A liquid crystal display comprising:
two substrates attached opposing each other;

63
Comand
Sub
C7 end
a sealing material formed outside a display area having a plurality of pixels for sealing liquid crystal between the two substrates; and

a hollow frame-shape sealing material formed at an external periphery of the sealing material for functioning as a suction in an atmosphere.
